Abstract (en)

[origin: WO9324381A1] The invention relates to a method for providing a transport or storage structure with a remote-readable escort memory. The escort memory (7) is first arranged in connection with a protective housing (8) protecting the escort memory (7). Initial closing of the escort memory (7) is performed by closing the protective housing (8) protecting the escort memory, and final closing of the escort memory (7) is performed by injection moulding: the initially closed protective housing (8) that contains the escort memory (7) is fully or in part encapsulated by injection mouldable plastic used for forming a wall (14) for the transport or storage structure (13), and the protective housing (8) and the escort memory (7) are integrated into the wall (14).
