Abstract (en)

[origin: WO9324396A1] An outlet for a transport container having a substantially rigid container frame is secured to a flexible bag for the transport of a fluid. The contents of the bag are discharged through the outlet arranged in the bottom of the container. The outlet has a flange by means of which it is fixed to the transport bag, as well as a discharge opening. The outlet is in the form of a hollow housing with the discharge opening arranged at one side of the housing so that discharge takes place at a distance from the fixing flange.
