Abstract (en)
The analog timepiece, in particular a wristwatch, having timekeeping and display means (5, 21, 22) as well as motorised driving means and a battery (9) in a housing (1) additionally comprises means arranged in the timepiece housing (1) for measuring and displaying, in particular, atomic radiation, which means have a bendable circuit carrier (2), which is folded into the housing (1), is developed in a planar fashion, and has a printed circuit. Said circuit carrier connects a sensor (detector, detecting element) (3) to the display means via a circuit (4) for amplification and evaluation. <IMAGE>
