Abstract (en)  
[origin: WO9321309A1] Clones (SEQ ID NO:1, SEQ ID NO:2, and SEQ ID NO:3) have been isolated and sequenced. An antisense construct has been made from part of SEQ ID NO:1 that blocks opioid binding in cells and has been used to produce transgenic animals having a reduced sensitivity to narcotic analgesics. The oligonucleotide sequence introduced into the animals at an embryonic stage was the first about 500 base pairs, but was reversed in direction. Oligonucleotide constructs of the invention are also useful as probes or as therapeutic and diagnostic agents.
