Abstract (en)
[origin: EP0644306A2] Guide rails have areas angled to one another, with at their facing face ends are connected to sheet components also with guide profiles. The sheet components (11) provided with guide profiles (6) have interconnected sheet component parts (17,18), which at their ends turned away from each other are provided with connecting devices for connection to the facing face ends of the guide rails (4,5). The sheet component parts are connected by adjustable and securable connectors (19,20) so that through a length alteration of the sheet component parts in the facing profile areas, an adjustment of the sheet length of the sheet components (11) to the actual angle between the guide rails can take place.
