Abstract (en)

[origin: EP0644469A1] The invention relates to a timepiece with analogue display having at least one universal time display mode. This timepiece includes - time display means consisting of an hour hand and of a minute hand, - time-zone display means including at least one analogue member for tagging the said time zones and able to provide an item of information referring to the geographic position of the said time-zones, with respect to the Earth, - motive means able to drive the said analogue display members opposite time, respectively location indications, and - electronic control means conformed in order to drive the said display means, by actuation of the said motive means, this invention being characterised in that the said analogue member allowing the tagging of time-zones consists of at least one of the two time display hands, for example the hour hand, brought by the electronic control means into a distinctive position in combination with the other hand, in particular the minute hand. <IMAGE>
