Abstract (en)
[origin: WO9325817A1] Pneumatic jack of the type comprising a rigid body (1) joined to the outer edge of a deformable membrane (2) so as to delimit with the latter a chamber of variable volume capable of being subjected to either atmospheric pressure or a negative pressure, by means of an air inlet located in said chamber. According to the invention, the body (1) and membrane (2) each have, substantially in the centre, an opening (15, 14) that can be closed, at least partially, by a disc (4, 3). Application in multiple position jacks.
