Abstract (en)

[origin: EP0645100A1] Sports shoe, in particular ski boot, which is designed with front entry (9) and the sole (2) and the upper part (3) of which are moulded from plastic and which, in the instep region, has two pressure distribution plates (5, 6) which are arranged on the outside of the upper part, which run from the toe region of the shoe, over the instep region and, bent upwards, along the front side of the shoe shaft, which are mounted displaceably in the front foot region of the upper part (3) in relation to the latter in the longitudinal direction of the shoe and movably in the transverse direction of the shoe and which overlap one another in the closed state of the shoe. At least one of the pressure distribution plates (5, 6) is mounted in the instep region with one or more hinges (14, 25, 13, 15) on the upper part of the shoe, which make possible a pivoting movement of this pressure distribution plate away from the other pressure distribution plate for opening or exposing the entry (9). <IMAGE>
