Abstract (en)  
[origin: EP0645215A1] There is proposed a fixing plate, on one plate surface (3) of which valves or other objects can be fastened. Provided in this one plate surface (3) are two sets (28, 29) of anchoring grooves (2', 2'') which are distributed over the plate surface (3) so that the different groove sets (28, 29) interlock. Within a respective groove set (28, 29), the groove cross-sections are identical. However, the groove cross-sections of one groove set (28) are greater than those of the other groove set (29). In this way, a simple and secure fastening of different-sized structural elements to one and the same plate surface (3) is possible. <IMAGE>
