Abstract (en)

[origin: EP0645221A1] The pressure-applying device has the pressure-applying elements (4, 5) which rest on the workpiece to be worked. For adaption to use different cutting-circle diameters (9) of the tools (6), the pressure-applying elements (4, 5) can be adjusted in a direction (22, 23) lying obliquely with respect to the transporting direction (11) of the workpieces. In order to be able to set the pressure-applying elements (4, 5) in relation to the profile depth (8) of the profile cutters of the tool (6), too, the pressure-applying elements (4, 5) can be adjusted in a direction (23, 34) lying with opposite obliquity with respect to the transporting direction (11). The position of the adjusting directions (22, 33, 23, 34) is chosen so that the pressure-applying elements (4, 5), upon adjustment, arrive at an optimal position in dependence on the cutting-circle diameter (9) and the profile depth (8) of the respective tool (6). <IMAGE>
