Abstract (en)
[origin: EP0645508A2] In the case of a scaffolding-platform plank (1) made of rectangular lumber with preferably covered ends (3) which are supported on rests of the scaffolding, the invention provides that, essentially over their length between the ends (3) and out of the plane of their flat underside (6), there projects at least one strip or a plurality of strips (4, 5; 14 to 16; 22 to 25), the strips being in parallel arrangement in the latter case, and the strip(s), when the plank ends (3) are supported in the scaffolding, is/are provided as reinforcement against bending when the plants are subjected to loading, and is/are arranged such that it/they serves/serve for support in a stack of a plurality of horizontal planks (1) of the same design located vertically one above the other.
