Abstract (en)
[origin: EP0442395A2] A dartboard consists of a skeleton having spokes and tyres (2) limiting between them a plurality of zones, in each of which a spring-loaded segment (4) is guided axially displaceably. A contact plate (9) having contacts serves for indicating hits for each segment (4). To simplify and improve a dartboard of this type, the segments possess rearwardly pointing tenons (33), on each of which is arranged an elastic contact cap (34') triggering the hit contact. The contact cap (34') has a plurality of spherical elevations (51) arranged in a triangle and resting on the contact plate (9). <IMAGE>
