Abstract (en)
[origin: EP0645789A1] A position switch is specified having a switch housing (1) for fastening on an object, which contains the switching mechanism and the electrical contacts and which is provided with a covering cap, which position switch can be produced at relatively low cost, can be used in a flexible manner and can easily be installed (assembled), while complying with the conditions for destruction resistance and reliability against being outwitted. This object is achieved in that the switch housing is arranged in a fastening part (2), which at least partially engages around said switch housing, in such a manner that it can be displaced in rotation and longitudinally before fastening, and can be fastened in the fastening part.
