Abstract (en)
[origin: FR2689256A1] A watch crown (30) translationally locked by a watch housing frame (10). A winding stem (20), which is lengthwise translationally movable whereby various setting or movement-winding functions may be accessed, is movably mounted in the middle of said crown (30). Said stem is rotatably engaged with the crown by a bearing (22) having a cylindrical circumference with a non-circular cross-section which matches the circumference of a central bore (32) in the crown. The end of said stem is provided with a gripping head (24).
