Abstract (en)
[origin: WO9326013A1] A flexible, telescopic antenna (1) having a plurality of antenna elements (2, 3, 4, 5, 6) comprising a principal structural component based on a polymeric material, the polymeric material being associated with or impregnated with conductive material in the form of fibres and/or particles to form a matrix, each antenna element being so constructed that the fibres and/or the particles provide the required degree of surface resistivity to the antenna element.
