Abstract (en)

[origin: EP0646335A1] The part of the boot concerned, in particular an inner-shoe (bootee) tongue for a ski boot, consists essentially of a leaktight, semirigid plastic outer part (1) having an alveolar structure (6) directly covered by a foam-type padding (4) and of a woven or knitted lining (5). The air enclosed in the cavities of the alveolar structure forms a shock-absorbing pad (padding) which is particularly effective in dynamic compression.
