Abstract (en)

[origin: EP0646688A1] The exterior-handle arrangement has a bearing bow 1 which can be premounted on the inside of the exterior door panel 5 and into which are already installed the pull rod 3, which is separate from the door handle 2 and is pretensioned by a compression spring 32 and which acts on the lock-release lever 41, and a holding-plate arrangement 46 for the lock cylinder 4. The door handle 2 and the lock cylinder 4 can be fitted at a later date from outside by snapping in, even when the door is closed. The door handle 2 is thereby brought, at its bearing end 20, into engagement with a bearing journal 11 of the bearing bow 1, whilst there is obtained between the pull rod 3 and the door handle 2 a coupling device 27 which allows a relative transverse movement of the pull rod 3 in relation to the door handle 2 and consequently a close guidance and additional sealing of the pull rod 3 in a guide orifice 24 of the bearing bow 1 by the use of an O-ring 26. <IMAGE>
