Abstract (en)

[origin: EP0646897A2] A method and a device for reserving a parking space are proposed, the user making a binding reservation before the start of the journey. The reservation can be made by telephone, appropriate terminals or radio communication with a central location. Input takes place by means of a corresponding keypad or the telephone keypad, a destination and a code, for example the licence number of the vehicle, being entered as the input. The central location finds a parking space situated in the vicinity of the specified destination and advises the user of this. A fee for use is charged when a bill is presented. <IMAGE>
