Abstract (en)

[origin: WO9324975A1] An electrical installation system which includes miniterminals (2) disposed at predetermined intervals throughout a room, and electrical outlets (S1) which can be moved between respective miniterminals. The miniterminals (2) and the conductors (1) that supply power to the miniterminals are placed behind a protective strip (5). The gap (7) formed between the protective strip (5) and the surface on which the miniterminal (2) is mounted is covered by a covering strip (3) which lies flush with a spring-biassed cover flap (8) which functions to cover the contact entrance to the miniterminal (2) when no electrical outlet (S1) is connected to the terminal. The miniterminal (2) will conveniently include a compartment for accommodating antenna and/or telephone cables. This miniterminal is also conveniently provided with latching means (10) which coact with latching elements (6) on the electrical outlet (S1) when the outlet is connected to the miniterminal (2).
