Abstract (en)

A method of processing with a developer a silver halide photographic light-sensitive material is disclosed, the material comprising a support and provided thereon, a silver halide emulsion layer comprising silver halide grains having not less than 90 mol % chloride, the emulsion layer or a hydrophilic colloid layer adjacent to the emulsion layer containing a tetrazolium compound or a hydrazine derivative, and replenisher for developer being supplied to the developer in an amount of not more than 200 ml per m<sup>2</sup> of the material processed, wherein the developer contains a carbonate salt in an amount of not less than 0.2 mol/liter.
