Abstract (en)
[origin: WO9401349A1] In a large wheeled bin (1) of the type commonly used for refuse collection a vertical divider (4) is inserted dividing the bin into two compartments (5 and 6) for the collection of different types of recyclable material. The planar divider (4) has lugs (8) protruding through holes in the side walls (9) of the bin, the lugs being secured by caps (10) engaged over the lugs. A description of the barbed engagement of the caps (10) with the lugs (8) is given together with an embodiment in which there are no caps (8) but the divider is held in place by deformation of the side walls (9) due to a convex profile on the lower edge of the divider (4).
