Abstract (en)

[origin: EP0648597A1] In order to be able to vary the inherent frequency of a high-speed cutting press with regard to the number of strokes of the latter, at least one linear spring (1) is provided which is situated parallel to the crank mechanism between the press frame (10) and the slide (12) and one end part (13) of which is connected to the slide (12) by means of a lever (8) and the other end part of which is connected to the press frame (10) at a fixed point (2), the lever (8) having two arms and being mounted in a lever bearing point (11) and the lever bearing point (11) being displaceable in the press frame (10) to extend the lever (8). <IMAGE>
