Abstract (en)

[origin: EP0648912A1] The invention relates to the assembly of a roller-shutter box and frame via coupling elements (21) which are fitted on the upper frame leg (111) and are positively connected to the baseboard (311) of the roller-shutter box. As an improved solution, in conjunction with this assembly, it is proposed to provide, on the upper frame leg (111), spaced-apart coupling elements (21) with a front overhang (211) beyond the frame leg beneath which, when the roller-shutter box is fitted on the frame, there engages a claw (312) formed on the front of the baseboard (311) of the roller-shutter box, the stabilisation of the assembly of the roller-shutter box and the frame taking place by an additionally positively locking connection (213, 314) between the baseboard (311) of the roller-shutter box and the rear region of the coupling elements (21) fitted on the upper frame leg (111). <IMAGE>
