Abstract (en)

[origin: EP0649181A1] The present invention relates to an antenna (1) of the type for a portable radio device, particularly comprising a helical antenna (2) coupled by its base to a transmitter/receiver, characterised in that the pitch of the helix (8) made of a conducting material constituting the helical antenna (2) is variable according to the height of the helix, and decreasing from the base (8B) of the helical antenna up to its peak (8A).
