Abstract (en)
[origin: WO9401843A1] An alarm device for an electrical apparatus is provided which provides an alarm signal when the electrical apparatus is moved whilst unplugged from its electrical supply. The alarm device may be supplied with an over-ride means for preventing the initiation or continuation of the alarm signal. The alarm device can be provided inside the protected electrical apparatus, or it can be provided as a separate device which is fixed securely to the protected apparatus.
