Abstract (en)

[origin: EP0649925A1] Lateral guide device for heald frames in weaving looms, comprising a first section (3, 4, 5) permanently fixed to the loom structure (T) and a second section (11, 12) carrying the guide cheeks (2) for the heald frames (1), said second section being apt to slide in respect of the first section in a direction towards and away from the heald frame (1) and to be fixed to said first section by means of a fast locking jaw clamp (5), apt to be locked by way of a tie rod (8) operated by a cam lever (7). The device also comprises means (6, 14) to keep unvaried the angular positioning of the second section during its sliding movements, as well as adjustable stop means (15) to limit the movement of said second section in the direction towards the heald frames (1). <IMAGE>
