Abstract (en)

Method for building inside and outside walls of a building, characterised in that use is made of elongated construction elements of wood or light concrete (2) which are piled up each other and connected with each other in vertical direction by anchoring profiles (7) with U-shaped, circular or n-angular cross section to the construction elements (2). The profiles (7) with U-shaped, circular or n-angular cross section show in the longitudinal direction notches (7.1) occurring at distances corresponding with the heights of the construction elements (2). In these notches (7.1) the profiles (8) and (11) are inserted with their narrowest side, and rotated over 90 degrees, so that the profiles (8) and (11) are unbreakable connected to the profiles (7), with U-shaped, circular or n-angular cross section. Then the profiles (8) and (11) are connected to the construction elements (2) by means of the profiles (9). <IMAGE>
