Abstract (en)
[origin: WO9325234A1] Methods and compositions for preferentially targeting the delivery of a substance to a sub-population of mammalian cells. The vehicle of the invention includes a targeting moiety capable of associating with or forming an envelope defining a compartment that contains the substance to be delivered to the sub-population of cells. The targeting moiety also contains a domain capable of interacting with a member of a binding pair located on the surface of the sub-population of cells.
