Abstract (en)  
[origin: US5595396A] A retention device of a boot on a gliding board, especially a snowboard. The device includes a retention element associated with the board, cooperating with a complementary retention element associated with the boot, together ensuring a connection between the boot and the board according to different degrees of freedom. The device includes a groove for one of the elements, and a rib for the other element. The rib and the groove having complementary shapes to enable cooperation by nesting. The device also includes a gripping mechanism for one of the elements, and a latching mechanism for the other element forming a removable latch for actively retaining the rib nested in the groove.
