Abstract (en)
[origin: WO9426366A1] The device for mounting and removing wheels on roller blade skates, wherein the axles are set through mutually aligned recesses in a frame and are mounted in recesses, comprises an axle which at a free end has an opening or circumferential groove. Engaging in the opening or circumferential groove is a separable locking member in the form of a locking pin or hook, the axle being set in place by moving the clamping lever (9) to the corresponding rotational position. The wheels (15) of the roller skate are mounted for rotation on this axle.
