Abstract (en)

[origin: DE4337363C1] The kitchen unit has the heating compartment built into the body of the unit with stainless steel sheet walls (3) and similar cladding on the inside of the door (4). An electric connector socket (8) is provided in the wall for plugging in of electrically heated hot plate (9) in form of a shelf. The interior of the compartment can be provided with a fan and/or a humidifier. The underlying drawer has no immediate connection with the invention, but shows the possibility of combination of the compartment with other elements at ergonomic levels. Insulation is provided between the walls of the compartment and the door and body panels. The walls themselves may be powder-coated or enamelled or overlaid with heat-resistant plastic.
