Abstract (en)
[origin: EP0650764A1] The invention relates to a spray device intended to be mounted on a fluid dispenser connected to a reservoir; of the type comprising a head (1) provided with an expansion chamber (10) into which emerges the ejection orifice of the said dispenser; and which communicates via at least one outlet conduit (11) with a nozzle (2). According to the invention, the said nozzle consists of an articulated internal element (21) which is, at least partially, housed in the outlet conduit (11) and of an external element (22) fixed so as to bear in a sealed manner against the said internal element (21) in order to define, between their respective surfaces in contact, a system of swirling (turbulence-creating) channels communicating with the outlet conduit (11) and emerging on the outside via a spray orifice (220) made through the external element (22).
