Abstract (en)

[origin: EP0650810A1] The device has a feed unit with pressure rollers. The diameter of each roller (8), approx. above the cutting edge (11) of the blade (10), decreases in a step (15). The larger diameter is on the side located in front of the cutting edge in direction of movement, the smaller diameter is on the side behind the cutting edge. Each pressure roller has two cylindrical sections (16,17). The sections are connected by a conical roller section in the area of the diameter step. The larger roller section is slightly conical.
