Abstract (en)

There is provided a particulate agglomerate detergent component comprising a solid salt, and a binder, wherein said binder is applied as a fluid and comprises a) at least 20% by weight of alkali metal silicate; and b) at least 30% by weight of anionic surfactant such that the weight ratio of said anionic surfactant to said alkali metal silicate is from 1:3 to 3:1. There is also provided a process for making particulate agglomerate detergent components.
