Abstract (en)

[origin: EP0651410A1] A groove, into which a positioning element (20) which is like an annular disc is inserted, is cut out on the shaft (14) which has a square cross-section. A lever element (26) is pushed onto each of the two ends of the shaft (14), the aperture in the lever element being formed to correspond to the cross-section of the shaft (14) in order to ensure that it is driven in a rotationally fixed manner. The lever elements (26) are clamped to one another by means of screws (30) and are held in axial contact on the positioning element (20). In consequence, the lever elements (26) are also fixed in the axial direction. <IMAGE>
