Abstract (en)

[origin: WO9402400A2] A device for receiving film rolls and for cutting sections of film has a housing with at least one dispensing compartment. Each dispensing compartment has a dispensing opening and a cutting blade (8) of a cutting device (6) which cooperates with a cutting profile (5) and which is movable in the longitudinal direction of the cutting profile (5) and transversely to a film web (26) drawn from the compartment. In order to cut sections of a web of film which may be made of different materials, with a high and uniform cutting quality, the cutting device has at least two rolls (7) between which is arranged the cutting blade (8).
