Abstract (en)

[origin: EP0652330A2] The invention relates to a concrete-containing moulded object for gutters, gullies or similar elements of a gutter system, having a liquid-tight and chemical-resistant layer which is arranged in a U-shaped or rectangular clearance. The moulded object is characterised in that the layer (12) is connected in a liquid-tight manner, via layer regions (14), longitudinally on both sides to plastic strips (16) and on the end side to plastic brackets (15) in order to form a three-dimensional, permanent part of a shuttering (10) which is surrounded by the concrete body (28). The invention further relates to a method of making such a moulded object. <IMAGE>
