Abstract (en)  
[origin: WO9402022A1] A surface germicidal composition comprises a dyestuff which is capable of photo-dynamic inactivation of micro-organisms. The dyestuff preferably generates singlet oxygen on exposure to light and is substantive to microorganisms, conveniently being selected from the group comprising Rose Bengal, Erythrosin B and phthalocyanin sulphonates. The composition may optionally include other ingredients such as one or more surfactants (for cleaning purposes) and/or one or more solvents.
