Abstract (en)  
[origin: WO9403575A1] Deflocculating polymer having hydrophilic backbone and one or more hydrophobic side chains, being a block copolymer having alternating hydrophobic and hydrophilic groups, or having nonionic monomers and ionic monomers, comprising monomer units containing a ketone group. These deflocculating polymers can for example be used in granular and liquid detergents, preferably in liquid detergent composition comprising a dispersion of lamellar droplets of detergent active material in an aqueous continuous phase.
