Abstract (en)

[origin: EP0653178A1] The device for suction and storage of waste includes a casing (3) which, on the one hand, comprises waste storage means and at least one separation compartment (6), the lower part of which is open and opens onto the waste storage means, and which, on the other hand, is equipped with ventilation means and includes a waste introduction opening and an air evacuation opening (15). According to the invention, the ventilation means consist of at least a first fan (5) which is placed inside the casing (3), the intake orifice (8) of which fan is connected, towards the exterior of the casing (3), to a waste collection conduit, and the delivery orifice (7) of which fan opens into the upper part (6a) of the separation compartment (6), so that the air flow delivered by the first fan (5) is projected substantially horizontally into the separation compartment (6); the device furthermore comprises a grille (9) for separating air and waste, which grille is interposed between the separation compartment (6) and the evacuation opening (15) of the casing (3), and which is inclined downwards from the delivery orifice (7) of the first fan (5). <IMAGE>
