Abstract (en)

[origin: EP0528330A1] The invention relates to a press with a press table (2) and a sliding table (3). In order to avoid the bowing of the sliding table (3) or its tool mounting plate with the mounting surface (17), the bearing surfaces (15, 16) between the press table (2) and the individual sliding table (3) on the press table (2), or on the sliding table (3) or on both of the tables (2, 3) are formed in accordance with a bending line which would result for a flat press table under load. <IMAGE>
