Abstract (en)

[origin: EP0653261A1] In a tundish for a multi-strand casting installation for casting identical or different steel sections, at least one nozzle block (5) is provided for each strand. In order to achieve simple adjustment to different sections, a nozzle brick (7) of the nozzle block (5) has a rotationally symmetrical circumferential surface (8) which can be inserted into a correspondingly rotationally symmetrical aperture (9) in a perforated brick (6). The outlet opening (10) of the nozzle brick (7) lies eccentrically with respect to the axis (A) of rotation of the rotationally symmetrical circumferential surface (8). <IMAGE>
