Abstract (en)
The invention is concerned with plastic containers, which may be refilled with granular product many times. A means for fitting a dispensing device (12) to the outside of the plastic container (11) in such a way that it is safely stored and yet cannot come into direct contact with the granular product during storage is provided. The dispensing device (12) is easily removable from the plastic container (11) when required for use, and may then be fitted back on to the outside of the container after use. This may be repeated many times. In this way, any risk of caking of the granular product caused by the presence of water on a wet dispensing device (i.e. after the device has been removed from the washing machine) is eliminated.
