Abstract (en)

[origin: EP0653533A1] Lock for a key-operated locking of the espagnolette of the fitting of a slide-and-tilt window, consisting of a lock case which is inserted in the window casement and which has a bolt which is displaceable at right angles to the direction of displacement of the espagnolette and which, in the locking position, projects with a stepped extension out of the lock case and engages positively into a perforation of the espagnolette and which can be actuated by means of the key-operated locking bit of a built-in profiled cylinder, the built-in profiled cylinder being pushed longitudinally displaceably into the lock case and being lockable by means of a screw extending transversely to its longitudinal extension and parallel to the direction of displacement of the bolt and engaging into a threaded hole of the built-in profiled cylinder, the screw which serves for locking the built-in profiled cylinder being formed by a grub screw actuable by means of a spanner with inner engagement, and the spanner being capable of being introduced into the corresponding recess of the grub screw solely through a perforation in the espagnolette transferred into the closed position. <IMAGE>
