Abstract (en)
[origin: DE4338794C1] The invention relates to an extruded profile seal which consists of an elastomeric material and is intended for windows, the seal being inserted between the window frame and the glass pane and exhibiting a base web from which, to one side, a grid-like anchorage foot projects centrally and, on the other side, two sealing elements project. For pliant and sealed abutment when said extruded profile seal is guided around right-angled corners, the invention provides that one sealing element comprises an obliquely outwardly projecting sealing lip (3) which extends approximately from the centre of the base web (1) and has an approximately right-angled bent-off portion (4) back to the profile centre, and the other sealing element comprises a tubular sealing body (6, 7) which extends from the base web (1) alongside the sealing lip (3) and has at least one outwardly projecting sealing lip (10) (Fig. 1). <IMAGE>
