Abstract (en)

[origin: EP0653678A2] A process for the processing of a colour-photographic silver-halide material whose silver-halide emulsions comprise at least 90 mol% of silver chloride, with the steps (a) exposure, (b) developments with a colour developer and (c) treatment with H₂O₂ or a compound which liberates H₂O₂, in which the colour developer contains an antioxidant having a positive redox potential, measured against a Pt/Ag/AgCl electrode, is distinguished by increased sensitivity.
