Abstract (en)
[origin: EP0654228A1] Ski boot comprising an upper in the form of a collar (2) which is closed around the leg by means of two flaps (2a,2b) which overlap and enclose an inner comfort bootee (3). This collar (2) is closed by means of at least one strap (6), one end of which is permanently linked, directly or indirectly, to the collar (2) on the outside of the boot, for example by means of two rivets (21,22) on the inner face of the collar, this strap traversing the collar (2) via an opening (19) formed on the inside of the boot and returning via the outside of the collar to be attached to a tensioner (8) mounted on the outside of the boot. The absence of an anchoring point on the outer flap (2a) of the collar makes it possible to have a thin, flexible flap properly encasing the leg and thereby ensuring comfort and satisfactory holding. <IMAGE>
