Abstract (en)  
[origin: EP0654322A1] This is an edging machine in which elastic means (25) capable of urging the rocker (14) towards the associated feeler (17) are interposed between this rocker (14) and the supporting structure. According to the invention, this feeler (17) being mounted so that it can move on the supporting structure, there are provided, in addition, between the rocker (14) and this feeler, auxiliary elastic means (28) which are themselves also capable of urging this rocker (14) towards the feeler (17). Application to the edging of spectacle lenses. <IMAGE>
