Abstract (en)  
[origin: EP0654567A2] The pivotable glass pane (3) acting as window is fixed to a frame profile (5), and has sealing components (14) and at least one water deflecting component on the ridge side above the glass pane. On the window frame under construction (10) a sealing profile (14) is arranged around the periphery of the window (3), and on its inside has an all-round water deflecting channel (15). In the closed state of the window, at least on the ridge-side edge of the window, the glass pane (11) of the window lies in the sealing profile (14) so that the upper surface of the sealing profile closes to the upper side of the glass pane (11), and the side edges (21,29) of the glass pane locate in a sealed manner on the sealing profile (14).
