Abstract (en)
[origin: EP0654844A1] Mounting device on a vehicle aerial (antenna) for mounting the aerial in a cut-out (19) of a body panel (8), with a lower part (5) for positioning on the underside of the body panel (8), with an upper part (18) for positioning on the upper side of the body panel (8), and with means (24) for bracing the lower part and upper part in such a manner with respect to each other that the body panel (8) is secured between them, the lower part (5) being connectable to a tubular stub (1) onto which the upper part (18) is pushed. Provided on the lower part (5) and/or on the upper part (18) are a plurality of projections (14, 15, 16, 21) for engagement in the cut-out (19) of the body panel (8). The projections can form pairs whose mutual distances apart are different and between which there lies in each case that portion of the tubular stub (1) which leads through the cut-out (19) in body panels (8). <IMAGE>
